

THE **FIRE**  **CONTINUUM**  
 MAY 21-24, 2018 • MISSOULA, MT  
**CONFERENCE**  
 PREPARING FOR THE FUTURE OF WILDLAND FIRE

Program Schedule						
Sunday, May 20						
7:00 PM	Afterhours Networking - Brooks and Brown, Holiday Inn, 200 South Pattee Street					
Monday, May 21						
7:00 to 5:30	Registration Desk Open - University Center, Level 3 Foyer					
Training and Educational Workshops						
8:00-10:00	#6 Teaching the Oregon State University Fire Science Core Curriculum			#9 Operations and Application of Unmanned Aircraft Systems for Forest and Burn Area Mapping and Monitoring		
8:00-12:00	#1 Learning the Photoload Sampling Technique: Visually estimating surface fuel loadings from photographs for research and management application		#2 Clear talk about wild fire: Meeting the communications challenges of the wide wildfire audience	#3 Reaching Deep into Our Collective FireToolboxes to Get More of the Right Fire on the Landscape	#4 Introduction to the Interagency Fuels Treatment Decision Support System (IFTDSS)	#5 Linking wildfire burn mosaic and lynx habitat modeling
	#11 Unmanned aircraft in fire research and management	#12 FireWorks Educational Program: Handon Activities to Engage Students and the Public about Wildland Fire Science		#14 Geospatial Fire Modeling Using FlamMap6	#15 NASA Wildfire Applications Toolbox: Training in Availability, Access, and Use of Earth Observation Data, Models, and Information	
10:00 to 12:00	#13 Publishing in International Journal of Wildland Fire			#7 Wildfire hazard and risk assessment: concepts, terminology, and applications	#10 Applying Advanced Technology to Enhance the Situation Unit	
12:00 to 12:30	Lunch - on your own					
1:00-5:00	Exhibitor Set-up - Grand Ballroom, Level 3 University Center					
CONFERENCE BEGINS						
Dennison Theater, UM Campus						
WELCOME AND OPENING REMARKS						
Presentation of the Colors						
Chris Dicus, President, Association for Fire Ecology President and Alen Slijepcevic, President, International Association of Wildland Fire						
12:30 to 1:00	Tribal Elder Welcome - Tony Incashola, Sr., Confederated Salish and Kootenai Tribes					
CONFERENCE OPENING KEYNOTE						
1:00 to 1:30	Vicki Christiansen, Interim Chief, US Department of Agriculture, Forest Service					
CONFERENCE KEYNOTE						
The Fire Season Next Time: The Need for a Modern Analytical Strategy for Wildfire Management						
1:30 to 2:10	Dave Calkin, PhD, Supervisory Research Forester, Human Dimensions Program, US Forest Service Rocky Mountain Research Station					
LONG TERM FIRE PLANNING PANEL SESSION						
Matthew Thompson, Research Forester, RMRS						
Tim Sexton, Program Manager, Wildland Fire Research Development & Applications Program						
2:10 to 2:50	Riva Duncan, Interagency Fire Staff Officer, Umpqua National Forest					
INCLUSIVITY IN FIRE MANAGEMENT AND SCIENCE						
2:50 to 3:15	Sara Brown, Acting Director, USFS Forest Service, RMRS, RD&A and Human Performance & Innovations and Organizational Learning and Diego R. Pérez-Salicrup, Universidad Nacional Autonoma De Mexico					
3:15 to 3:30	Break and transition to concurrent sessions, University Center					

	Concurrent sessions							
	Room One	Room Two	Room Three	Room Four	Room Five	Room Six	Room Seven	Room Eight
	Special Session	Special Session	Concurrent Session	Special Session	Concurrent Session	Concurrent Session	Concurrent Session	Special Session
	Assessing landscape change under changing climates with the spatial process model FireBGCv2	S4.1 Social opportunities to increase adaptation and reduce shared wildfire risk	Prescribed Burning	Advancements in fuel mapping with emphasis on updating strategies	Pre-Fire Risk & Modelling	Fire Plans	Fuel Treatment	Operationalizing Responder Exposure Metrics to Support Response Decisions, Learning, and Accountability
	Organizer Bob Keane	Organizer Maureen Essen		Organizer Reeves				Organizer Thompson
3:30-3:50	S1.1 Using landscape modeling to quantify ecological variability as a means to assess resilience Robert E Keane	S2.1 What We Already Know About the Social Components of Wildfire Risk Sarah McCaffrey	1. Prescribed Burn Decision Support Tool (PB DST): An Essential Process to Support Your Decision Making Brian Levine	S3.1 Annually Updated Rangeland Plant Functional Type Percent Cover Maps at 30m Resolution for Improved Fuel Mapping Matthew O. Jones	7. Regional Differences in Wildfire Risk in the United States from Systematic Operational Risk Assessments-How Risk is Conceived by Land Managers Erin Noonan-Wright	13. Source Water Protection Investment in the Rio Grande Headwaters Alan G Hook	19. Adaptive silviculture for climate change: Preparing dry mixed conifer forests for a more frequent fire regime Mike Battaglia	S4.1 Modernizing wildland fire performance measurement: A brief history and future directions David Calkin
3:50-4:10	S1.2 Can fire and fuel management maintain or restore ecological resilience under a changing climate? Rachel Loehman	S2.2 Wildfire Collaboration Networks: An Empirical Study of Network Governance of Wildfire Risk in North Central Washington Cody Evers	2. Modelling an econometric function to predict prescribed burning costs Francisco Rodríguez y Silva	S3.2 A geospatial approach to account for interannual variability in rangeland fuels Matt Reeves	8. Simulated vegetation and fire hazard at Eglin Air Force Base for 50 year time periods under multiple prescribed fire management scenarios using Fuel Classification and Characteristics System (FCCS) and a landscape-fire-succession model Jim Cronan	14. Net Gain to the Public Benefit in Fire Management Decisions Philip William Bowden	20. Advancing fuel modeling and fuel treatment analysis capabilities with STANDFIRE Russell A Parsons	S4.2 Leveraging evidence-based management and key performance indicators to improve responder safety Matthew Thompson
4:10-4:30	S1.3 Evaluating ecological shifts across levels of wildfire suppression on US northern Rocky Mountain landscapes Kathy Gray	S2.3 Co-producing research and responses to address wildfire risk Carina Wyborn	3. Can we have it all? Optimal burning regimes for management of fuel, carbon, water and vegetation Tina Bell	S3.3 Updating of LANDFIRE Vegetation and Fuel Data using Transition Modeling Donald Long	9. The association between emerging fire occurrence hotspots and historical area burned in the boreal zone of Alberta, Canada Jen Beverly	15. The European Wildfire Risk Node: towards uniting formal and informal networks on wildfire risk Nuria Prat-Guitart	21. Interagency Fuels Treatment Decision Support System: Facilitating Fuels Planning For All Caroline Noble	S4.3 Aviation analytics to inform strategic planning and risk management in large fire support Crystal Stonesifer
4:30-4:50	S1.4 Can herbivore management be used to reinforce fuel reduction programs? Robert Riggs	S2.4 Cross-Boundary and Adaptive Governance to Facilitate Adaptation to Wildfire Risk Maureen (Mo) Essen	4. Combining lidar and other data to create landscape scale, site specific Fire Hazard Index for the Four Forest Restoration Initiative Mary Lata	S3.4 Improving national shrub and grass fuel maps using remotely sensed data to support fire fuel assessments Jim Vogelmann	10. Forest Fire Prediction Modeling in Terai Arc Landscape of Lesser Himalayas using Maximum Entropy Method Amit Kumar Verma	16. Developing a Fire Danger Operating Plan for North Carolina from a State Fire Agency Perspective Meyer "Cabe" Speary	22. A retrospective analysis of fuel treatment effectiveness following the 2014 Carlton Complex Fire in semi-arid forests of north-central Washington State Susan Prichard	S4.4 The Wildfire responder triangle: integrating safety, probability of success, and values at risk for operational response Jessica R Haas
4:50-5:10	S1.5 Evaluating future success of whitebark pine ecosystem restoration under climate change using simulation modeling Lisa Holsinger	S2.5 Network analysis of wildfire transmission and implications for risk governance Alan Ager	5. Fire and Ecological Forest Management and Prescribed Fire- Perfect Together Bob Williams	S3.5 Operational periodic updating of LANDFIRE fuels data Kurtis Nelson	11. California Burning: Developing Sustainable Solutions To Emerging Climate Challenges - Electric Utilities As A Case Study Martin Kurtovich	17. After the Conflagration: Where Do We Go From Here? The Life Cycle of a Fire Management Plan Scott Murphy	23. Radial Thinning to Retain Legacy Trees: Effects on Tree Growth and Fire Behavior Sharon Hood	S4.5 The spatial and temporal dynamics of responder exposure to snag hazards following mixed-severity fires Christopher Dunn
5:10-5:30	S1.6 Assessing alternative management strategies for whitebark pine under future climate change Kathryn Ireland	S2.6 Demographic analysis of transboundary wildfire exposure in the western US Palaiologos Palaiologou	6.The Ultimate Test of the Effectiveness of Fuel Management in the Wildland/Urban Interface Stephen Cornelsen	S3.6 Discussion	12. GridFire: Open Source Fire Behavior Modeling in the Cloud Gary Johnson	18. Will You Miss Me When I'm Gone? A future Without JFSP... John Cissel and Tom Zimmerman	24. Stand-level dynamics of pinyon-juniper woodlands following hazardous fuels reduction treatments in Arizona David Huffman	S4.6 Previous burn scars- a blessing or a curse? Responder mobility as a hazard in the post-fire environment Christopher O'Connor
5:30 to 7:30	No host social - Grand Ballroom, University Center, 3rd level							
7:00-9:00	University of Idaho Alumni, Parnters and Friends Mixer - UC Art Gallery, University Center, 2nd level Hosted by: University of Idaho, Wildland Fire Program, Department of Forest, Rangeland, and Fire Sciences							
7:30+	Afterhours Networking - Tamarack, 231 W. Front Street Yoga Session - Wellnees Lounge, University Center Commons, 2nd level							

Tuesday, May 22								
6:00 am	Running Group - TBD							
7:00 to 7:30	Wellness Session - Wellness Lounge UC Commons 2nd Level							
7:00 to 5:30	Registration Desk Open - University Center, Level 3 Foyer							
Dennison Theater, UM Campus								
WELCOME BACK AND LOGISTICS								
Alen Slijepcevic, IAWF President								
CONFERENCE KEYNOTE								
What Will it Take to Advance Wildland Fire Behavior Science?								
Mark Finney, Research Forester, USDA Forest Service, Missoula Fire Sciences Laboratory								
FIRE BEHAVIOR PANEL SESSION								
Laura Ward, Lolo National Forest Fire Management Officer								
Rodman Linn, Senior Scientist, Earth and Atmospheric Sciences Division, Los Alamos National Laboratory								
Erin Noonan-Wright, Fire Application Specialist, Wildland Fire Management Research Development and Application Group (WFMRD&A)								
8:00 to 8:10								
8:10 to 8:50								
8:50 to 9:30								
9:30 to 10:00	Networking Break with Exhibitors - Grand Ballroom, University Center, 3rd level							
10:00 to 12:00	Concurrent sessions							
	Room One	Room Two	Room Three	Room Four	Room Five	Room Six	Room Seven	Room Eight
	Special Session	Special Session	Special Session	Special Session	Special Session	Special Session	Special Session	Special Session
	Climate change and altered fire regimes: what should we expect?	Coupling the social and biophysical assessment of wildfire risk	Fire refugia: identification, formation, function, and management	Toward a physical understanding of wildfire behavior: modeling and experimental approaches	EPA Wildland Fire Research: The Intersection of Emissions, Ambient Characterization and Public Health Outcomes Public Health Implications of Smoke Exposure Moderator: TBD	Assessing resilience to wildfires across the social-ecological spectrum	NASA Applied Science Efforts: Collaborations in Earth Observation Data, Information, Models and Tools Supporting Wildland Fire Management	Wildfire hazard and risk: assessment and management
	Organizer Parks	Organizer Hamilton	Organizers Miller and Haire	Organizers Morvan, Simeoni, and Finney	Organizers Brown and Landis	Organizer Naficy	Organizer Ambrosia	Organizers Scott and Riley
10:00-10:20	S5.1 Fire regime shifts under climate change depend on the timeframe and ecological context Sean Parks	S6.1 Risk Interdependence and Alignment of Social and Ecological Networks in Fire-prone Forests Matthew Hamilton	S7.1 What Are These Things We Call Fire Refugia? Meg Krawchuk	S8.1 The promise and challenges of CFD physics-based wildland fire behavior modeling William Mell	S9.1 Long-term trends in fire behavior and changes in population at risk Ana G. Rappold	S10.1 Linked and compound disturbance interactions between multiple fires in conifer forests of the western US Brian J. Harvey	S11.1 NASA Applied Science Efforts: Collaborations in Earth Observation Data, Information, Models and Tools Supporting Wildland Fire Management Vincent G. Ambrosia	S12.1 Improved Simulation of Probabilistic Wildfire Risk Components for the Conterminous United States: 2018 FSim Product Updates Karen Short
10:20-10:40	S5.2 Fire During High-velocity Climate Change Can Trigger Ecological Transformation Shelley Crausbay	S6.2 Wildfire Exposure and Community Capacity to Manage Wildfire Risk: A Coupled Biophysical and Social Analysis of Wildfire Risk in Communities across the Western United States Max Nielsen-Pincus	S7.2 Mapping and Characterizing the Distribution of Forest Wildfire Refugia Across Burn Severity Mosaics Ryan Walker	S8.2 Using process-based coupled fire/atmosphere models to gain better understanding of wildfire dynamics Rod Linn	S9.2 Communicating Risk: Air Quality Index, Wildfire Guide, and Online PM Medical Course Susan Stone	S10.2 Fire-fire interactions and multi-scale controls on fire severity in historical mixed-severity fire regimes of the northern U.S./southern Canadian Rockies Cameron Naficy	S11.2 A topographically resolved wildfire danger and drought monitoring system for the conterminous United States Zachary Holden	S12.2 Deterministic generation of flame-length probabilities for use in risk assessments Joe H. Scott
10:40-11:00	S5.3 Climate-induced variations in global severe fire weather conditions W. Matt Jolly	S6.3 Assessing and Managing Wildfire Risk Across Diverse Forest Ownerships in a Fire-Prone Landscape Susan Charnley	S7.3 Mapping and modelling patterns in wildfire refuge using satellite imagery Luke Collins	S8.3 Improvement of sub-modeling in physical fire spread models Albert Simeoni	S9.3 Cardiovascular and cerebrovascular emergency department visits associated with wildfire smoke exposure in California in 2015 Ana G. Rappold	S10.3 Compromised resilience of northern boreal forests following large wildfires Marc Parisien	S11.3 WRFX - Numerical framework for operational coupled fire-atmosphere-fuel moisture forecasting Adam K. Kochanski	S12.3 Calculating Fire Season Length with Weather and Fire Activity Metrics Karin L. Riley
11:00-11:20	S5.4 Effect of reduced warm-season cloud cover on aridity and fire danger in coastal California Park Williams	S6.4 A Typology of Community Wildfire Exposure from US National Forests Cody Evers	S7.4 Fire Refugia in Forests of Mexico: What do we Know? Larissa Yocom	S8.4 How 10 years of physical assumptions led to the development of the Balbi model, from laboratory scale to field scale Jacques-Henri Balbi	S9.4 Comparison of Aspiration and Inhalation Exposure Methods for Predicting Pulmonary Toxicity of Biomass Smoke Yong Ho Kim	S10.4 Change in vegetation patterns over a large forested landscape based on historical and contemporary aerial photography Jamie Lydersen	S11.4 Monitoring Great Basin Shrub and Grasslands using Landsat and MODIS data for Fire Applications Jim Vogelmann	S12.4 Modeling Synchronous Large-Fire Activity Across the Conterminous United States Karen Short

11:20-11:40	S5.5 Reexamining the drivers of recent wildfire activity in the Pacific Northwest U.S. Zachary A. Holden	S6.5 Network Governance of the Chernobyl Exclusion Zone: When Fire and Radiation Mix (Phase 1) Derric Jacobs	S7.5 Influence of Topography and Fire Weather on Late-successional Forest Fire Refugia in the US Pacific Northwest Garrett Meigs	S8.5 Direct measurements of energy transport in naturally burning fires Bret Butler	S9.5 Discussion	S10.5 Persistent fire-induced vegetation state switches in southwestern ponderosa pine forests Chris Guiterman	S11.5 Enhanced Wildland Fire Management Decision Support Using Lidar-Infused LANDFIRE Data Birgit Peterson	S12.5 Modeling Long-Term Effects of Fuel Reduction on Fire Severity on the Deschutes National Forest Rachel Houtman
11:40-12:00	S5.6 Extensive Burning Reduces Future Landscape Flammability in North American Boreal Forests: Implications for Anticipating 21st-Century Fire-Regime Shifts Adam Young	S6.6 Anticipating interactions between forest management and wildfire as private forestland owners adapt to climate change Jeffrey Kline	S7.6 Drivers and outcomes of burn severity in the northwestern Canadian boreal forest Ellen Whitman	S8.6 Laboratory experiments in fires spreading with wind and slope Mark Finney		S10.6 Climatic controls of post-fire conifer regeneration in low-elevation forests of the western U.S. Kimberley Davis	S11.6 Conservation Impacts of a Near Real-time Monitoring and Alert System for the Tropics Karyn Tabor	S12.6 Results and application of the National Risk Assessment Greg Dillon
12:00 to 1:00	<b>Boxed Lunch</b> - provided (University Center, Commons, 2nd level) <b>Student/Mentor Lunch</b> - Grand Ballroom, University Center, 3rd level Concurrent sessions - University Center							
	Room One	Room Two	Room Three	Room Four	Room Five	Room Six	Room Seven	Room Eight
	Special Session	Special Session	Special Session	Special Session	Special Session Organizers Brown and Landis	Special Session	Special Session	Special Session
	Climate change and altered fire regimes: what should we expect?	Coupling the social and biophysical assessment of wildfire risk	Fire refugia: identification, formation, function, and management	Toward a physical understanding of wildfire behavior: modeling and experimental approaches	EPA Wildland Fire Research: The Intersection of Emissions, Ambient Characterization and Public Health Outcomes Emission Characterization	Assessing resilience to wildfires across the social-ecological spectrum	S11.7 NASA Applied Science Efforts: Collaborations in Earth Observation Data, Information, Models and Tools Supporting Wildland Fire Management	Wildfire hazard and risk: assessment and management
	Organizer Parks	Organizer Hamilton	Organizers Miller and Haire	Organizers Morvan, Simeoni, and Finney	Moderator: Brian Gullett	Organizer Naficy	Organizer Ambrosia	Organizers Scott and Rile
1:00-1:20	S5.7 Analyzing Risk of Regeneration Failure in the Managed Boreal Forest of North Western Quebec Tadeusz Splawinski	S6.7 Building Community Capacity for Cross-Boundary Fire Risk Management Daniel R. Williams	S7.7 Distribution of Persistent Forest Fire Refugia Patches in the Alberta Rocky Mountains Marie-Pierre Rogeau	S8.7 Observing kinematic structures of large wildfire plumes from ground and airborne platforms Craig Clements	S9.6 The chemical composition of aerosols from wildland fires: Current state of the science and possible new directions Michael Hays	S10.7 Historical Fire Disturbance Regimes and Implications for Forest Restoration James Johnston	S11.7 Development and Application of Spatially Refined Remote Sensing Active Fire Data Sets in Support of Fire Monitoring, Management and Planning Janice L. Coen	S12.7 Assessing Wildfire Risk in Real Time on the 2017 Frye Fire LaWen Hollingsworth
1:20-1:40	S5.8 Simulation of extreme wildfire events and impacts across spatial and temporal scales with statistical and dynamical models LeRoy Westerling,	S6.8 Assessing influences on social vulnerability to wildfire using surveys, spatial data and wildfire simulations Catrin Edgeley	S7.8 Life-History Traits Mediate The Impact Of Climate Change And Enhanced Fire Regimes On Fire Refugia Of Endemic Tasmanian Conifers Andres Holz	S8.8 Wind effects upon the behavior of wildfires: unsteady and 3D effects Dominique Morvan	S9.7 Influence of Combustion Factors on Biomass Emissions Brian Gullett	S10.8 Long-Term Understory Vegetation Response to Prescribed Burning in Pinyon-Juniper Woodlands Alexandra Urza	S11.8 Completion of a new open-source tool to map burned area and burn severity Joshua Picotte	S12.8 Use of FSPRO and a Quantitative Wildfire Risk Assessment (QWRA) to create Exceedance Probability Curves to Aid Incident Prioritization Rick Stratton
1:40-2:00	S5.9 Climate- and vegetation-driven changes in area burned in the Sierra Nevada Matthew Hurteau	S6.9 Obstacles to improving wildfire risk governance in Greece Palaiologos Palaiologou	S7.9 Flammability as an ecological driver Dylan Schwilk	S8.9 Modeling of stationary wind-driven flames to understand wildland fire behavior Micahel Gollner and Arnaud Trouve	S9.8 Status of EPA's National Emissions Inventory for Wildland Fire Amara Holder	S10.9 Fire across North America, a continuum process across three contrasting countries Diego Pérez-Salicrup	S11.9 Linking Remote Sensing and Process-Based Hydrological Models to Increase Understanding of Wildfire Effects on Watersheds and Improve Post-Fire Remediation Efforts Mary Miller	S12.9 Wildfire hazard assessment for community land use planning: a case study in Chelan County, WA Eva Karau

2:00-2:20	S5.10 The Climate Change altered wildland fire regime for Canada in the 21st Century: Possible Implications Mike Flannigan	S6.10 Prioritising WUI fuel treatments using statistical models of past fire ignition and spread Owen Price	S7.10 Does it Matter if it Burned? Fire Refugia Composition and Structure in Oregon's Blue Mountains Will Downing	S8.10 Extreme Fire Behaviour in Complex Topography Domingos Viegas	S9.9 Implications of Burned Area Approaches in Emission Inventories for Modeling Wildland Fire Pollution in the Contiguous U.S. Shannon Koplitz	S10.10 2017 Wildfires in British Columbia: Urgent Need to Adapt Management to Improve Forest Resilience Lori Daniels	S11.10 Post-Wildfire Decision Support with NASA RECOVER Keith Weber	S12.10 Wildfire Risk to Homes in Western Montana April Brough
2:20-2:40	S5.11 Mid-21st-century climate changes increase predicted fire occurrence and fire season length, Northern Rocky Mountains, United States Karin L. Riley	S6.11 Participatory modeling of stakeholder-developed landscape strategies for fire and fuels management Andrew Merschel	S7.11 The importance of fire refugia in the persistence and recolonization of a fire-sensitive conifer in northwest Patagonia Jennifer B. Landesmann	S8.11 Contrasting Internal and External Vulnerabilities of Buildings to Fire Jose L. Torero	S9.10 Improving EPA's Fire Emissions Inventory: A Dive into MODIS Fire Detections George Pouliot	S10.11 Reintroduction of Fire as a Natural Process in Banff National Park - Implications for Wildlife Habitat Management and Forest Resilience Jane Park	S11.11 Socioeconomic Impacts of Geospatial Data in Wildfire Emergency Response Planning: A Case Study using the NASA RECOVER Decision Support System William Toombs	S12.11 Wildfire threat to surface drinking water in western Montana Julie Gilbertson-Day
2:40-3:00	S5.12 Assessing fuel treatment effectiveness during wildfires under future climate conditions Carrie A. Minerich	S6.12 Sharing the road: managers and scientists transforming fire management Craig Bienz	S7.12 Wildfire impacts on bird communities and habitat in the Sky Islands of Southern Arizona Jose Iniguez	S8.12 Discussion	S9.11 Discussion	S10.12 Toward a resilient wildfire management organization: current efforts and future needs David Calkin	S11.12 Leveraging spatio-temporal data to improve wildland fire management decision support systems: a NASA Wildfires partner perspective W. Matt Jolly	S12.12 Success rate of alternative criteria for the prioritization of fuel management in the Deschutes National Forest Ana Margarida Gracio de Barros
3:00 to 3:30	Networking Break with Exhibitors - Grand Ballroom, University Center, 3rd level							
	Concurrent sessions - UC							
	Room One	Room Two	Room Three	Room Four	Room Five	Room Six	Room Seven	Room Eight
	Concurrent Session	Concurrent Session	Special Session	Special Session	Special Session Organizers Brown and Landis	Special Session	Concurrent Session	Special Session
	Firefighter Safety	Smoldering Fires and Fuel Detection	Fire refugia: identification, formation, function, and management	Toward a physical understanding of wildfire behavior: modeling and experimental approaches	EPA Wildland Fire Research: The Intersection of Emissions, Ambient Characterization and Public Health Outcomes Smoke Measurement and Modeling	Assessing resilience to wildfires across the social-ecological spectrum	Smoke Issues	Wildfire hazard and risk: assessment and management
			Organizers Miller and Haire	Organizers Morvan, Simeoni, and Finney	Moderator: Matt Landis	Organizer Naficy		Organizers Scott and Riley
3:30-3:50	25. Chemical Evaluation of Wildland Firefighting Gear Crystal Forester	31. Peatland Fires: Field Reference Conditions – Challenges and Research Needs Kevin C. Ryan	S13.1 Fire refugia promote forest resilience Jonathan Coop	S14.1 How reduced plume entrainment in large fires effects the burning rate Sara McAllister	S9.12 Modeled Smoke Impacts on Ozone and Particulate Matter Evaluated with Field Study and Routine Air Quality Measurements Kirk Baker	S10.13 Risk-based spatial fire planning from concept to execution: a case study of the Tonto National Forest Christopher O'Connor	37. The roles of prescribed fire in reducing duff loads and subsequent wildfire emissions and air pollution Yongqiang Liu	S12.13 Optimizing large-fire response based on risk and responder exposure Yu Wei
3:50-4:10	26. Team Awareness Kit, enhancing firefighter safety through better situational awareness David Zader	32. Mapping the impact of Canadian boreal forest canopy interception on satellite detection of smoldering wildfires Joshua Johnston	S13.2 Patterns and conservation value of fire refugia in the northwestern United States Arjan Meddens or Anthony Martinez	S14.2 Flow Dynamics of Plume Attachment in Fires on Slopes Torben P. Grumstrup	S9.13 Characterization of Aerosol Polar Organic Compounds of Smoldering and Flaming Combustion of Red Oak, Irish Peat, and Eucalyptus Jaoui Mohammed	S10.14 The value in resilience: integrating normative and objective dimensions of resilience in fire-prone landscapes Philip Higuera	38. Quantifying avoided wildfire emissions from significant wildfires Thomas Buchholz	S12.14 Concepts and tools to simplify complicated risk management problems) Matthew Thompson
4:10-4:30	27. Joseph P. Roise	33. Role of the ornamental vegetation in the propagation of the Rognac fire 2016 Anne Ganteaume	S13.3 Are Essential Fire Refugia Black or Green? The Real Megafire Story Rick Hutto	S14.3 Modeling the role of fuel moisture on ignition in thin fuels Shankar Mahalingam	S9.14 Improving the vertical distribution of wildland fire emissions in the CMAQ modeling system Joseph Wilkins	S10.15 Social resilience to wildfire: Perspectives from fire-affected communities Elizabeth Covelli Metcalf	39. Simulating Plume Rise, Dispersion and Radiative Smoke Impacts In a Coupled Fire-Atmosphere Framework Adam Kochanski	S12.15 Fire Risk at California Utilities Mason Withers

4:30-4:50	28. Pocket Wildfire Analyst Santiago Monedero	34. Fuel variability impacts fire behavior: small-scale studies utilizing drone technology Chris Moran	S13.4 The fate of fire refugia in future, warmer climates: Modeling spatial patterns and thresholds of disturbance-resistant areas in the Jemez Mountains, New Mexico USA Rachel Loehman	S14.4 A review of current knowledge of woodland firefighter safety zones Jean Louis Rossi	S9.15 Comparison of Ozone Measurement Methods in Biomass Burning Plumes Russell Long	S10.16 Planning for resilience in federal forest management: Analysis of the current state of practice Jesse Abrams	40. Plume Evolution from Wildfires and Aged Regionally Distributed Smoke Sampled during BBOP Lawrence Kleinman	S12.16 An assessment of wildfire risk from utility-related ignitions in California David Sapsis
4:50-5:10	29. Improving Wildland Firefighter Safety While Operating And Carrying Chainsaws & Supplies Tom Bendien	35. Daniel M Jimenez	S13.5 Recap and response by session organizers Carol Miller and Sandra Haire	S14.1 Experimental investigation of ignition and thermal degradation of natural fuels and structural materials under static and dynamic conditions Alexander Filkov	S9.16 Evaluation of Commercially Available Small Sensors (CO, CO2, NO2, H2S, NH3) in Wildland Fire Plumes Andrew Whitehill	S10.17 Recognizing Resilience of Indigenous communities in Canada to Wildland Fire Amy Christianson	41. The Summer of Smoke: 2017 Peter Lahm	S12.17 Wildfire Risk Mitigation at San Diego Gas and Electric Brian D'Agostino
5:10-5:30	30. Fireline medical: Solutions for the future Ray Storm	36. Homes as Fuel: Do We Need a New Fire Behavior Paradigm? Daniel Leavell	S13.6 Discussion	S14.6 Discussion	S9.17 EPA Wildland Fire Sensor Challenge: Preliminary Results from the Stage I Evaluation Matthew Landis	S10.18 Cross-Boundary Wildfire Governance Laurie Yung	42. Wildland Fire Smoke from Long-Range Enhances Ozone in the Southeastern United States Nathan R. Pavlovic	S12.18 Discussion
5:30 to 8:00	Poster session - Grand Ballroom, University Center, 3rd level							
6:30-7:30	IJWF/Fire Ecology Journal Associate Editors Meeting and Social - University Center, Room 330							
8:00+	Afterhours Networking Press Box. 835 E. Broadway or Hike to the M on Mount Sentinel							
Wednesday, May 23								
6:00 am	Running Group - TBD							
7:00 to 7:30	Wellness Session - Wellness Lounge UC Commons 2nd Level							
7:30 to 5:30	Registration Desk Open - University Center, Level 3 Foyer							
8:00 to 9:20	Concurrent sessions - University Center							
	Room One	Room Two	Room Three	Room Four	Room Five	Room Six	Room Seven	Room Eight
	Concurrent Session	Special Session	Special Session	Concurrent Session	Special Session	Concurrent Session	Concurrent Session	Special Session
	Firefighter Safety	Managing Wildfire Risk: Socio-Organizational Perspectives from Current Research: Part 1 - Co-Management and Collaboration	Characterizing Firebrand Exposure at the Wildland-Urban Interface (WUI)	Fuels Wildland Fuel Science	Western Wildfire Field Experiments Information Session	Fire Weather and Detection	Smoke and Plume Modeling	Lessons learned from long-term fuel treatment and fire monitoring studies
		Moderator: Emily Jane Davis	Organizers Gollner and Kuligowski		Organizer Hyer and French			Organizers Hood and Sala
8:00-8:20	43. Human Performance Optimization: A holistic approach to Improve Wildland Firefighter Performance, Well-Being, and Safety David Schary	S15.1 Factors facilitating and frustrating collaborative adaptive management in forest landscape restoration Tony Cheng	S16.1 Wildfire Exposure to Buildings: Vulnerabilities and Mitigation Strategies Stephen Quarles	49. Dead woody debris fuel load for Canadian forests Chelene Hanes	S17.1 The Fire and Smoke Model Evaluation Experiment Western Wildfire Campaign Roger Ottmar	55. A site suitability index for remote automated weather stations (RAWS) in Washington State using a weighted linear combination scheme Josh Clark	61. Direct Numerical Simulation of a Turbulent Helium Plume and Methane Pool Fire Nicholas T. Wimer	S18.1 The Importance of Time and Space when Monitoring Effectiveness of Forest Restoration Treatments David W Peterson
8:20-8:40	44. Implementation of Network-Enabled GPS Tracking Units During Operations: Challenges and Opportunities Joaquin Ramirez	S15.2 Co-Management Risk or Parallel Play? Examining Connectivity Across Wildfire Risk Mitigation and Fire Response in the Intermountain West Emily Jane Davis	S16.2 Characterization of Firebrands from Common Structural and Wildland Vegetative Fuels Aixi Zhou	50. Fuel Dynamics along a Climatic Continuum: Insights from Australia's most Dangerous Fuel Type James Furlaud	S17.2 Overview of the upcoming Western Wildfire Experiment for Cloud Chemistry, Aerosol Absorption and Nitrogen (WE-CAN) study Emily Fischer	56. The Diablo Wind and Extreme Fire Behavior during the 2017 Wine Country Fires Carrie Bowers	62. Real-Time Smoke Management Support using Paired Fuel/Atmosphere Risk Assessment with a Web-based Decision Support System Erin Law	S18.2 Succession in Columbia Basin sagebrush steppe following wildfire: insights from long-term vegetation monitoring Claire Wainwright

8:40-9:00	45. Risk based resource allocation for emergency response operations - wildfire to road crash rescue Martijn Van der Merwe	S15.3 Risk Co-Management on Interjurisdictional Lands Toddi Steelman	S16.3 Physical and Chemical Processes Controlling Ember Production in Wildland Fires David Blunck	51. Estimating Litterfall Rates Following Stand-replacement Disturbance in Northern Rocky Mountain Ecosystems Chris Stalling	S17.3 Fire Influence on Regional Environments and Air Quality (FIREX-AQ) James Crawford	57. The use of remote sensing and coupled weather-fire modeling for hazard identification and testing mitigation impacts in the northern Sierra Nevada Mountains Janice Coen	63. Calculation of smoke dimensions and estimation of affected area using calibrated optical sensors Andreas Jock	S18.3 Lessons from long-term stand dynamics of old-growth longleaf pine communities in the mountains of north Alabama, USA J. Morgan Varner
9:00-9:20	46. An Analysis of Wildland Firefighter Entrapment Fatalities on Prescribed Fires and Wildfires, in the US, 1990 to 2017 Richard McCrea	S15.4 Panel Discussion: Common themes, challenges, and opportunities in co-managing wildfire risk  Panelists: Tony Cheng, Emily Jane Davis, Toddi Steelman	S16.4 Breakage and Transport of Firebrands from Wildland Fuels Ali Tohidi	52. Modelling bushfire fuels using biophysical parameters Meaghan Jenkins	S17.4 Coordinated Activities of Fire Influence on Regional and Global Environments and Air Quality (FIREX-AQ) Carsten Warneke	58. Using Fire Weather Data in Tactical Decision-Making: the Dream and the Reality Christine Shaw Olsen	64. U.S. Fine Particulate Matter Air Quality Improves Except in Wildfire Prone Areas Crystal McClure	S18.4 Impacts of six different complex fire regimes in a longleaf pine ecosystem: Results over twenty-five years Sharon Hermann
9:20-9:40	47. It's the thought that counts Michael Williams-Bell		S16.5 Influence of Thermal Degradation in Dispersion and Deposition of Firebrands in a Turbulent Boundary Layer Babak Shotorban	53. Simulating the effectiveness of prescribed burning at altering wildfire behaviour in Tasmania, Australia James Furlaud	S17.5 FIREX-AQ: Fueled from below: Linking Fire, Fuels and Weather to Atmospheric Chemistry Amber Soja	59. Innovation in Early Detection – Real-Time Surveillance for Private and Commercial Use Artur Matuszczak	65. Discussion	S18.5 Fuel loads and simulated fire behavior in 24-year old, post-fire lodgepole pine forests Kellen Nelson
9:40-10:00	48. An Operational Fire Weather Alert System Tanner Finney		S16.6 Topographic effects on firebrand transport over a canyon Eunmo Koo	54. Revisioning fuels measurements using a novel 3D fuels sampling technique and remotely sensed data Eric Rowell	S17.6 Discussion	60. Multi-platform, multi-scale approaches to optimal fire characterization Charles Ichoku	66. Discussion	S18.6 Initial prescribed fire treatment reduces mixed-conifer forest resilience Malcolm North
